## Bis- Hotel Software

BIS HOTEL is a full-featured, functionally rich intelligent system with the power, flexibility and convenience to satisfy the needs of any hotel. Easy to operate and intuitive system installed at the reception.

It includes various features enabling you to achieve All-in-one card security management, tour group check-in and shift-to-shift operations.

### Bis-Hotel allows you to:

- Configure access control in your hotel
- Add locks to rooms
- Issue cards for admin, repair-men, staff and guests
- Decide who can enter specific rooms and when
- Create access zones eg. car-park, SPA
- Control all elements of the One key system

# Systems & Softwares

Bis- Hotel Software

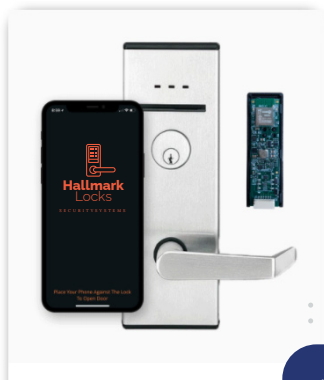

# Contactless Key

## Your Phone, Your Key

Allow Your Guests to Check-in and open  
their door(s) with their smartphone

## How it works?

Download mobile app to your smartphone.

The app interacts with Bluetooth capable locks allowing guests to open  
their rooms with their phone.

# Your Phone is Your Key

Unlock Your Hotel Rooms with a  
Smartphone

## Benefits for Your Guests

- Skip the front-desk
- Check-in from anywhere
- Open doors with a smartphone
- Securely share keys conditionally

## Benefits to Hotel Staff

- Automate check-in and out procedure
- Eliminate key cards & physical key costs
- Generate & view hotel activity reports
- Gather feedback upon client check out

## Other features

- Automatic key expiration
- Hotel listing across the world to app users
- In-app dining reservation
- In-app hotel announcements

# Electronic Hotel Locks

The most flexible Solution for future  
All-in-one card applications.

Achieve new standards in security,  
manageability, and scalability with  
our advanced hotel door locks.

ELECTRONIC HOTEL LOCK

VISUAL III RFID (V5 Series)

ELECTRONIC HOTEL LOCK

VISUAL RFID ALUMINIUM

ELECTRONIC HOTEL LOCK

BASE RFID (9004 SERIES)

# Unlock your Doors with A Card

A card provides easy access to rooms and gives a new and advanced experience to your guests.

RFID card technology is widely used in various industries because of its safety, convenience and efficiency.

With RFID hotel door locks, customers can only open the door in valid time and use the hotel-authorized key card.

## ELECTRONIC HOTEL CARD LOCK

GUARDIAN RFID

## ELECTRONIC HOTEL LOCK

SHADOW II RFID

## ELECTRONIC HOTEL CARD LOCK

BASE II 'LEVER' RFID

# Digital Smart Locks

Regain the confidence of your guests by offering a more trusted alternative to room entry options.

The RFID key card is not easy to be copied. If the customer accidentally loses it, just re-issue a new card.

And using RFID CARD makes easy to track door lock unlocking records.

# Energy Control Unit

Perfect solution to provide convenience to your guests and saving energy and money when guests are not in the room.

Insert your room card into a wall slot when you enter the room. This turns the electricity on.

And when you leave, you take your room key and thus turn the electricity off.

# Wireless Energy Management System

Take control of, and optimize operational systems and save more than 20% and card costs

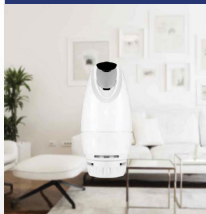

## Save energy through wireless technology

When it comes to your property's energy costs, unnecessary lighting, cooling and heating for hours can pose a significant drain on your bottom line.

An intelligent energy management solution will take control of, and optimize operational systems.

### Energy Management System

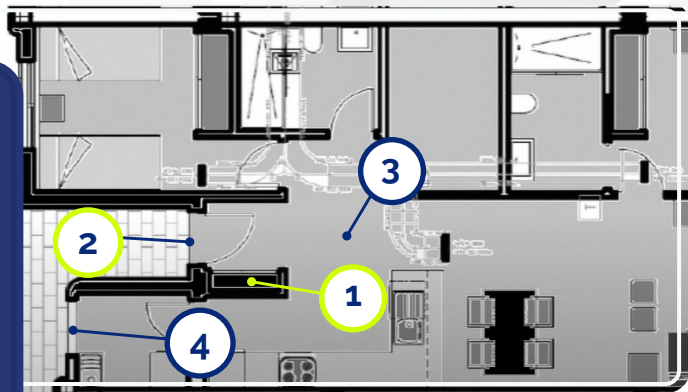

### Energy Management System

# Wireless Energy Management System

Take control of, and optimize operational systems and save more than 20% and card costs

1. Din rail mounted cardless energy saver ( In the Electrical panel )

3. Surface mounted motion sensor  
( on the ceiling )

2. Surface mounted door sensor  
( On the door frame )

4. Surface mounted window sensor  
( optional ) - ( on the window frame )

# Ensure Guest Comfort

Reducing energy cost should not compromise your guests' comfort, an intelligent energy management system will allow you to increase the efficiency of your operation systems.

## How it works?

An intelligent Energy management Solution will take control of the room temperature when the room is not occupied; never allowing it to be either too warm or too cold according to the hotels preferences.

As soon as the guest returns to their room, the system automatically returns to the guest temperature and lighting settings

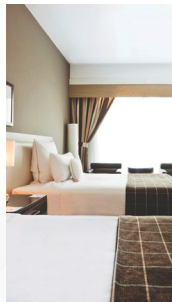

# Know When Guests Are in the Room

Using a combination of a wired or wireless motion sensor in the room and a contact sensor on the door, the energy management system is able to accurately determine if a guest is in the room

After the guest room door opens our motion sensor scans the room to detect if there is a guest presence. If the motion sensor detects any motion during its scan, the room setting is changed to "Guest Present".

The hotel room occupancy status is re-evaluated every time the guest room door opens and closes. Only hotel staff can obtain the occupancy information leaving guests in undisturbed privacy and comfort.

## When A Guest is in the Room

The system knows from the check in/out status whether a person in the room is a guest or hotel staff.

If the guest room is checked-in but unoccupied, the energy management system allows the guest room temperature range to be colder or warmer than when the room is occupied as well as turning off any lighting.

Immediately when the Energy Management System recognize guest presence from the contact sensor or/and the motion sensor, the guest settings for temperature and lighting are restored.

Maintenance can be managed more efficiently knowing remotely when a guest is not in the room

# Digital Hotel Signage

Touch panel with visual LED backlight  
with display

Our hotel signs are an elegant combination  
of design, innovation and technology.

We are happy to supply our hotel signs  
according to a customized design that fits  
into the hotel present "feel and look"

# Electronic Hotel Safe

Let your guests secure their confidential belongings.

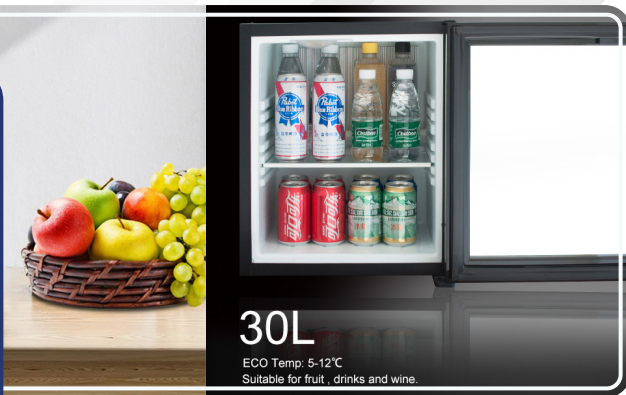

In-room safe is an economical choice for hotels to easily secure guest's belongings. Available in many sizes and models in order to satisfy different room style and need.

# Mini Bar Fridge

Fast cooling, Energy Saving & Eco friendly fridge for hotels

## 30L & 40L Mini Bar Fridge

Our mini bar fridge brand is famous for its "high quality, unique design, beautiful appearance and excellent cleaning performance in domestic and foreign hotel industry.

1. Healthy: Eco-friendly silent mini fridge for bedroom
2. Stability: low repair rate after working 3-4 years

# Cyber Digital Locker

Highly intelligent keyless locking solution for cabinets and lockers.

Ideal solution for keeping the belongings of users and employees of health centres, spas, gyms, sports centres, education centres, company dressing rooms, etc. as well as in the usually shared room closets of hostels.

# Secure your Guests Belongings

Provide a new level of security for both shared and assigned use lockers for your guests and staff.

This electronic hotel cabinet locking system is a perfect solution to ensure the security of hospitality industry worker's and guests belongings.

Its advanced access control features provide facilities managers with the flexibility and management control required in today's demanding workplace environments.

## ELECTRONIC CABINET LOCK

CYBER II TOUCH

## ELECTRONIC CABINET LOCK

CYBER II RFID

# Electronic Cabinet Locks

The lock allows multiple user to be accessed and can be programmed codes & keys are required to open the lock.

Electronic locks for lockers are the ideal solution for keeping the belongings of users and employees of health centres, spas, gyms, sports centres, education centres, company dressing rooms, etc. as well as in the usually shared room closets of hostels.

Easy management, operated by Code or Card.

# Door Control Unit

Provide better guest experience for your hotels.

DOOR CONTROL UNIT

Door control unit is the perfect solution to provide access control on common doors, such as parking barriers, health centers, gym room, conference room, staff entrances, guest night entrance and more.

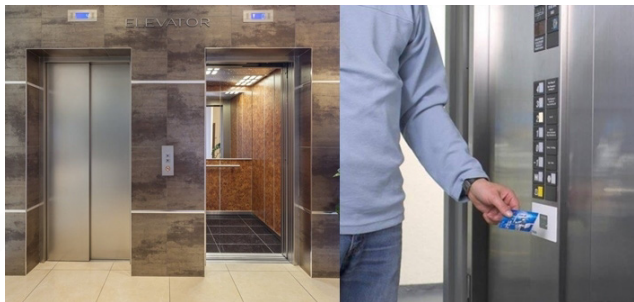

# RFID Elevator Controller

Improve your security with elevator access control

Elevators are high-traffic areas that are prone to a number of security vulnerabilities, and they pose additional challenges from a building security perspective.

Increase the security level of the hotel, as only guests with a valid keycard will have access to the elevators.

# Access Control

Minimize the security risk of unauthorized access to physical and logical systems.

There are two types of access control: physical and logical. Physical access control limits access to campuses, buildings, rooms and physical IT assets.

Logical access control limits connections to computer networks, system files and data.

# Temperature Access Control

These new products and features can help prevent exposure and contribute to protecting the public.

ZN-T95 is a biometric reader-controller that not only recognizes faces, it also detects elevated temperature, and if a person is wearing a protective mask.

The reader-controller can prevent people with elevated body temperature or no mask from entering a secure area. These new products and features can help prevent exposure and contribute to protecting the public.

**Guide**

GUIDE T120H  
Fever Screening Thermal Camera

Accuracy  
 $\pm 0.5^{\circ}\text{C}$

## Fever Screening Thermal Imaging Scanner

This is a fast temperature detection tool, which can be used to detect human temperature from a safety distance with accuracy of  $\pm 0.5$ . It is an economical and practical thermal camera that could meet the needs of primary temperature screening well.

Guide T120H can be deployed at the entrances and exits of the public area, which makes it an ideal device to improve the efficiency of epidemic prevention and protect public health.

## T120H

### Handheld Biometrics with Body Temperature Detection

Face Recognition

Temperature Detection

# RFID Exit Device

Enhance your operational efficiency with our reliable hotel lock systems.

RFID exit device allows access control of exit doors equipped with panic devices. It offers the same security features as the guestroom locks ensuring hotel property remains full access control from the outside as well as an easy and safe escape in case of an emergency.
